YAKUP ENES GÜVEN

BACKEND DEVELOPER

Istanbul, Türkiye | +90 (530) 797 3287 | yakupenes.guven@gmail.com
LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Backend Developer with 3+ years of full-time experience and 4+ years across backend, systems, and industrial software engineering. Designs and operates Python/Django REST services, data pipelines, and cloud-hosted platforms for enterprise and industrial use cases. Hands-on with SQL databases, Redis, Kafka, Docker, AWS, GCP, and self-hosted infrastructure. Built integrations and backend systems supporting tens of thousands of daily transactions and connecting APIs, optimization and machine-learning models, OPC, PLC, and SCADA environments.

CORE SKILLS

Backend: Python, Django, Django REST Framework, REST API design, Java, Spring Boot
Data & Messaging: PostgreSQL, MySQL, Microsoft SQL Server, Redis, Kafka, Airflow
Cloud & DevOps: Docker, AWS (EC2, S3, Route 53), GCP (Compute Engine, Cloud Storage), Hetzner, Linux/Ubuntu, Jenkins, Git/GitHub
Platforms & Integration: Distributed backend services, third-party APIs, MinIO, Keycloak, OPC, PLC, SCADA

PROFESSIONAL EXPERIENCE

SmartOpt | *Backend Developer & Systems Engineer*
Apr 2023 - Present
Istanbul, Türkiye

- Design, develop, and operate Python/Django backend services, REST APIs, and data pipelines for enterprise optimization, forecasting, and AI platforms deployed across AWS, GCP, Hetzner, and on-premise environments.
- BSH Container Yard: built and maintained a container-tracking backend that integrates multiple third-party APIs and supports tens of thousands of import/export transactions daily; owned backend development, deployment, and production maintenance.
- TOFAŞ EMDHO: developed an autonomous closed-loop system that ingests OPC/SCADA data into a machine-learning pipeline and writes model outputs back to operational tags using Django and Docker.
- Şişecam TDI: implemented the backend and DevOps foundation for a scenario-based AI prediction platform, reliably processing historical and future scenario inputs and outputs.
- EnergyOpt EPF: engineered multi-source data pipelines for daily, weekly, and annual electricity-price forecasting and ensured consistent model execution across local and cloud environments.
- BSH PlanOpt and EU projects: integrated ASP, PLC, and SCADA data sources; built preprocessing and model-execution services; supported production operations for planning, mobility, and sustainability platforms.

Siemens | *Part-time Working Student - DevOps*
Jan 2023 - Apr 2023
Istanbul, Türkiye

- Monitored development and test environments, followed deployment health, and supported ongoing development operations.
- Provisioned virtual machines and configured Jenkins and Docker environments for new and existing projects.
- Supported configuration management and environment readiness across project teams.

Schneider Electric | *System Software Architecture Engineer - Part-time*
Jan 2022 - Jan 2023
Istanbul, Türkiye

- Supported system architecture and project interfaces using AVEVA software, simulations, and industrial data.
- Developed Python and shell-based tooling for error analysis, reporting, and application workflows.
- Worked with PLC and SCADA systems, including software setup, system analysis, and integration.

EDUCATION

B.Sc. Computer Engineering - Full Scholarship — **2023**
Koç University — Istanbul, Türkiye

B.Sc. Electrical and Electronics Engineering - Full Scholarship — **2023**
Koç University — Istanbul, Türkiye

ADDITIONAL INFORMATION

Languages: Turkish, English
Honors: Vehbi Koç Scholar (3 times); Koç University Anatolian Scholarship Program
Selected Projects: Düzelt Beni (Django/DRF NLP application); Row Match REST API (Java Spring Boot backend case)
